Course Description

This course is the first half of the Algebra 1 course. It will lead into the Algebra 1B course, which will include the Keystone Examination. Algebra 1A is the transition from the concrete to the abstract study of mathematics. After a review of simplifying expressions, the students will study the structures of algebra, multi-step equation solving, properties of real numbers, graphing of linear equations and functions, and writing linear equations. The students will also learn to solve systems of equations, which will lead into further study of systems of inequalities in Algebra 1B.
